

# Quick Guide

## G.R.A.S. 67TS Turbulence Screen Kit

### Description

The G.R.A.S. 67TS is a Turbulence Screen Kit designed for mounting of a 1/4" flush-mount microphone or a traditional front-vented 1/4" microphone.

A flush-mount microphone can be attached to the turbulence screen with either a detachable O-ring or a holder plate and two M3 screws. These are part of the RA0295 Turbulence Screen Accessories for flush-mount microphone.

A traditional microphone with front venting can be attached to the turbulence screen with either an adapter for a straight or for an angled microphone. These are part of the RA0296 Turbulence Screen accessories for straight/angled microphone.

These parts necessary for mounting of microphone must be ordered separately.

The dimensions necessary for preparation of the test object are specified in a file on a USB flash memory that also contains correction data for different angles of incidence.

### Delivered Items

The following items are part of the delivery:

Turbulence Screen Assembly, including mounting flange	GU0244
